Quantitative researcher and economist with 6+ years of experience in integrated environmental-economic modelling and environmental impact assessment. Extensive experience applying quantitative modelling approaches to explore mitigation options towards sustainable food systems. Dissertation on assessing the impacts of food system transformation options (i.e., supply-side and demand-side measures, and environmental policies) at the macro level (i.e. regional, national, and global levels) using the integrated environmental-economic modelling approach based on the general equilibrium framework. 10 scientific papers have been published in peer-reviewed journals. Two first-authored papers, one published in **Environmental Science & Technology (SCI Q1, IF=10.8)** and the other in **Sustainable Production and Consumption (SCI & SSCI Q1, IF=10.9)**, along with a co-authored paper in **Nature Food (SCI Q1, IF=23.6)**. Seeking academic opportunities for the 2024-2025 academic year.
